

Create a water cycle rap (30-45min)

Watch [The Natural Water Cycle](#) video and Josh will guide you through the water cycle stages. During the video Josh will sing a “water cycle rap”.

Split your class into groups and assign them a water cycle stage. Task them with creating their own song, rap, or dance to explain their stage in the water cycle. You can tie all the stages of the water cycle together by getting the students to perform their stages in order!

Suggested topics to include:

- Change of water state
- Importance of water (environment, life, human needs)
- Locations where these stages occur

Tip: If your students are struggling, you can ask Droplet the chatbot in the [World of Water](#) for some help.
